

ARCHOIL AR4400 LP FIREARMS OIL

LUBRICATES AND PROTECTS

AR4400 LP Firearms Oil

AR4400 LP Firearms Oil lubricates and protects against wear and corrosion. AR4400 LP is not a firearms cleaner. Use AR4200 CLP for firearm cleaning.

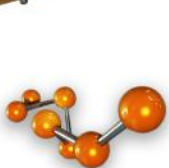

AR4400 LP is formulated with nano hexagonal boron nitride (hBN) which has been selected for its ability to bond with metal alloys, filling in asperities to create an extremely low friction dry film which protects against wear and corrosion. The resulting surface composition resists carbon, copper and lead buildup making AR4400 ideal for maintaining a firearm once cleaned. AR4400 emits no odor.

Features & Benefits

- Lubricates and protects with nano hexagonal boron nitride
- Forms a hard, dry extremely low friction surface
- Prevents corrosion
- Prevents carbon, lead and copper buildup
- Reduces maintenance
- Faster action
- Heavier viscosity than AR4200 CLP
- No odor

Packaging

4oz bottle with applicator tip. Larger packaging available for Gunsmiths and OEM.

INSTRUCTIONS FOR USE

Step 1

Apply to clean firearm.

Step 2

Saturate a cotton patch or mop with a few drops of AR4400 and pass through barrel 15-20 times. Use long slow passes ensuring you get complete coverage from muzzle to crown.

Step 3

After applying AR4400 let sit for 10 minutes or more. No need to neutralize since AR4400 does not contain ammonia. No need to cure with heat.

Step 4

Apply to trigger to maintain smooth and even trigger pull. Allow AR4400 to remain wet on the firearm for storage.
